— ABOUT SHOWHQ

ShowHQ is an operating system for live-event operations. Crew scheduling, equipment tracking, logistics, client approvals and payroll run in one system, so a production company works from records instead of spreadsheets, group texts and inbox threads. ShowHQ opens in private beta in Q4 2026 with event labor, AV, staging and production companies.

— THE IDEA

Control in the chaos.

A show runs on fragments: the RFP in an inbox, the crew grid in one spreadsheet, availability in a group text, the pack list in another, payroll re-keyed from timesheets. ShowHQ takes that loose operational matter — emails, crew names, case IDs, call times — and turns it into records the whole team works from.

— WHAT IT COVERS**Show day**

Today's calls, unfilled positions, crew on site, open offers, timesheets waiting and open incidents on one board.

Scheduling & staffing

A week grid of crew by day. Offers go out to crew, who accept or decline in their own portal; drafts publish in one pass.

Logistics & fleet

Show runs and sub-rental moves on one board, cut from load-ins and load-outs, with CDL and driving-hours checks and run sheets sent to the driver.

Inventory

Gear inventory with pick orders and returns.

Inbox

Email, client-portal messages and internal threads in one queue, sorted by who each thread is with.

Money

Estimates, invoices and payments, and timesheets that apply the workspace's own overtime, double-time and per-diem rules.

Portals

Crew web for offers, schedule, clock-in, timesheets and pay; a client portal for estimates, invoices, contracts and messages; an outside-coordinator portal scoped to their own shows.

People

Crew records with certifications and documents, HR requests and an incident log.
